

Waters Group 45° Bonding System

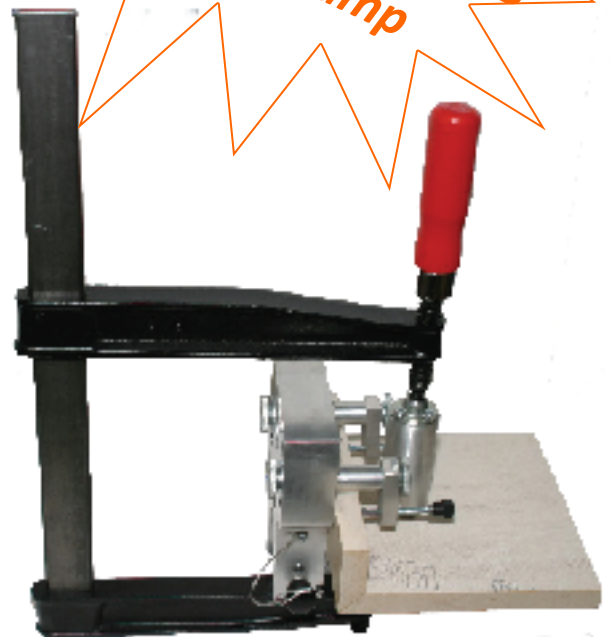

- ▶ for bonding of 45° metres for solid semblance
- ▶ facilitates considerably fixing and aligning of the front panel
- ▶ front panels are tightened before bonding and can be pivoted to the workpiece as often as necessary for adjusting and aligning

Operating cycle:

1. The bonding device is mounted to the work piece with clamping jaws
2. The front panel is clamped into the bonding device
3. The front panel can be pivoted by 90° in order to align mitre edge and joint exactly to each other
4. After the front panels has been fixed in the optimum position, the bonding agent is applied and the front panel is pressed against the work piece
5. For bonding of the front panel we recommend Integra bonding agents to achieve optimum adhesion and colourfast, merely invisible joints

Precision Finishing
£299 per clamp

The MITREFORMA™ is a fabrication tool designed specifically for creating mitred fascias in a quick, precise and fool proof way.

features:

- fast
- simple to use
- built-in square
- fascia clamping rod
- fascia retaining arm
- disposable glue-catcher
- high-quality aluminium & stainless steel construction
- white rubber plate
- quick release mechanism

benefits:

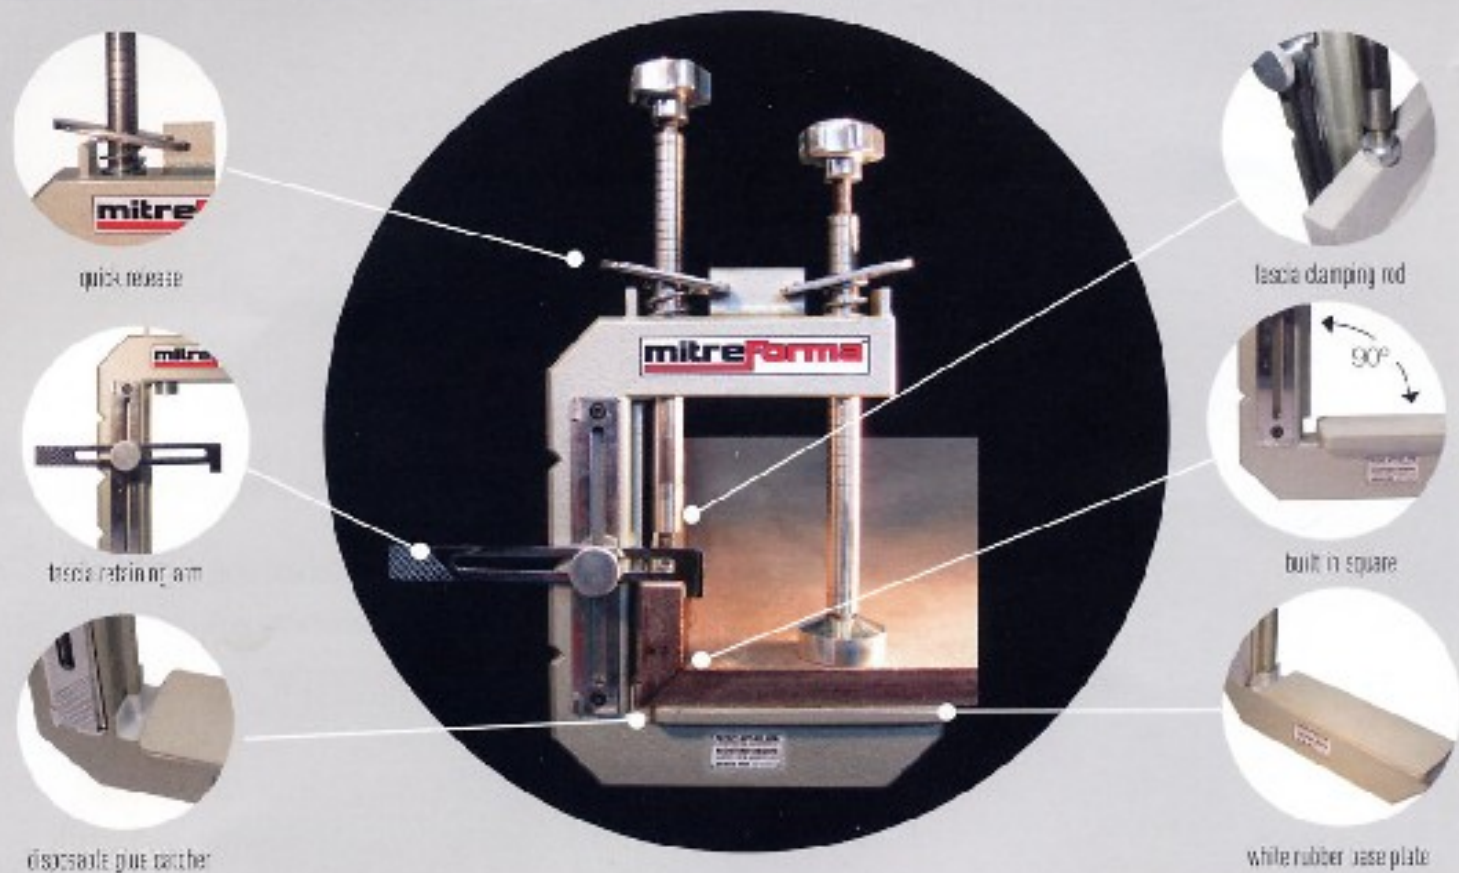

- cuts preparation time
- saves labour costs
- creates high-quality seams
- ensures tight seams
- ensures accurate alignment
- protects tool from glue overrun
- long lasting investment
- protects surface of stone
- fast operation

available in two sizes:

- Up to 130mm fascias
- 120 - 320mm fascias

mitreFORMA™

This product is protected by all relevant patent & registered design applications

Buy 1 - 4 clamps £129.00 net each
 Buy 5 or more £119.00 net each
